Sectoral Update

Overall, the sector is strengthening. Credit growth is picking up, retail credit quality is healthy. FY22 has seen ~14% credit growth after 3-4 years of single digit growth. Asset quality issues are behind us and should improve further. Cheque bounce rates have been dropping from the peak in August-20, and we are below the pre-covid rates. This points to improving financial security of households.

There has been an improvement in corporate asset quality, with no emerging systemic stress. Business momentum is coming back and collections are strong. Stress levels of SME loans, especially in the Microfinance segment should improve with the economy. However, cost pressure due to rising inflation is hurting poor families. We are still not seeing broad based improvement of unemployment figures. NPLs are likely to come down due to the creation of National Asset Reconstruction Company Ltd (NARCL). NARCL will be a centralized entity to take over NPL. This development is likely to benefit PSU Banks which have a large proportion of such assets.

Interest Rate Environment

The Reserve Bank of India did not raise the policy rates in its April 2022 Monetary Policy Announcements considering that economic growth is still fragile. It is taking steps to tighten liquidity in the system through other means. G-Sec yields have been rising, with the 10 -year benchmark yields at ~7.40%. Corporates that had been issuing Commercial Papers are moving to borrowing from Banks as the funding costs of the latter are lower, allowing corporates to borrow at lower rates. The Credit to Deposit Ratio is ~70% showing there is headroom available for banks to growth without increasing deposit rates.

Way Forward

- Banking is essentially a cyclical business. As the sector sees a cyclical recovery, there can be strong improvement in earnings. As growth becomes broad based, earnings growth is also likely to grow accordingly.
- In a rising rate environment, banks have the pricing power, while NBFCs and HFCs are at a disadvantage as banks have the ability to borrow from depositors at significantly lower costs.
- As banks become stronger on asset quality, they could become more comfortable with increasing their unsecured loan books. This could allow them to build on interest margins.
- With the pickup of credit growth, it would be important to look at businesses able to deliver above average growth and have potential to surprise on earnings.
- Risk of interest rate aggression (Banks capturing higher yielding loans from other NBFCs/HFCs) will play out. Valuations of NBFCs/ HFCs are not reflective of the same.
- There is increasing pressure on NBFCs player as banks have been capturing market share. Banks are aggressively issuing credit cards and are building share in areas such as Consumer Durable finance at the cost of NBFCs. In other areas such as vehicle fleet finance, some NBFCs have entered into co-financing arrangements with Banks.
- Smaller banks are seeing relatively cheaper valuations and may see a long runway for growth as the cycle turns around.
- RBI is expected to raise rates over next 12 – 18 months. A large proportion of loans are linked to repo rate. As interest rates increase, banks' floating loans may get re-priced faster vs. fixed rate liabilities, driving better Net Interest Margins. Banks with a higher share of floating loans and CASA deposits will benefit to a greater extent.

- Segments of the sector that are non-lenders such as Insurance or asset management companies can serve as steady state compounders over the medium to long term. Select players in this segment such as providers of market infrastructure (exchanges, depository services etc.) are at stretched valuations.

Segments in the Portfolio

Banks (~67% of the portfolio)

This segment of the portfolio largely comprises of major private sector banks (~45% of the portfolio), with some holdings in large PSU banks as well (~10% of the portfolio.). Large banks have the capacity effectively raise funds from the market and have the capacity to distribute financial services as well. We have added mid-sized private and public sector banks as well, which can give comfort on valuations (~12% of the portfolio).

Financial Services (~21% of the portfolio)

This segment is dominated by housing finance corporates (~10% of the portfolio). These companies may see relatively lower stress in the coming months as a large portion of their loan portfolio is lent out to salaried workers. This segment of population is likely to see lower stress levels in the coming months. The balance is in financial services companies that are involved in businesses such as payment services, ratings, asset management etc. which make up ~11% of the portfolio.

Insurance (~9% of the portfolio)

Life Insurance companies (7% of the portfolio) make up the majority of this segment. Life Insurance companies are steady state compounders who have a long runway for growth over the long term. The fund also holds a private sector general insurance company.
